Flange Fit
Flange Repair Clamp

1. Stops leaks in flange gaskets

Flange Fit Repair Rings are designed for easy installation.

No special surface preparation is required prior to installation.

The product can be installed by your own personnel and can be used multiple times.
Bolt leakage is stopped by the injection of a suitable sealant fluid via sufficient injection sockets.

In case of a small gap between the line flanges, gaskets can be installed for temporarily sealing prior and during injection.
Detailed design is done based on line temperature, design temperature and design pressure.

In order to be able to quote the correct product, please download and complete the Flange Fit Data Sheet from our website and send it to us.

Clamps are hydrotested as per ANSI class at 1.3 x operating pressure
